

# Prostate Markers

## Know Error<sup>®</sup>

### Specimen Provenance

Know Error<sup>®</sup> is a test done from an oral swab that is compared to a biopsy specimen to confirm the specimen being tested belongs to the right patients. It rules out switching concerts and contamination of a sample to ensure the patient is getting the most accurate test results.

#### Science:

Know Error<sup>®</sup> is cheek swab done in the clinic that is sent to the lab for DNA match to the biopsy specimen, that may be used with all tissues. The STR profiles are assessed from multiplex panel of 16 genetic markers.

#### Results:

Know Error<sup>®</sup> results confirm if the tissue is a DNA Match, non-match, or if there was contamination.
