

# Prostate Markers

## Prolaris®

### Who To Treat-Post Surgery

Prolaris® is a test conducted on tissue that was collected during a prostate biopsy for patients who are active surveillance candidates. It is also available for post-prostatectomy patients to determine the relative risk of failing surgery.

#### Science:

Prolaris® is a 46-gene expression signature includes cell cycle progression genes selected based upon correlation with prostate tumor cell proliferation.

#### Results:

The Prolaris® score provides a risk of disease progression and a ten year mortality risk.
